

Over 20,000 deaths will occur this winter due to the cold and cold related illnesses

Protect the vulnerable with a GTi Cold Alarm

- Provides early warning of falling temperatures by traffic light style LED display and audible alarm at lowest temperature
- Small discreet unit with wall bracket – 93mm (w) x 65mm (h) x 28mm (d)
- Inbuilt power supply with 10 year life expectancy
- 2 years manufacturer's warranty

How it works:

Green Light Temperature above 18°C. Normal safe environment – The air temperature is healthy and the Green light will flash approximately every 10 seconds.

Amber Light - Warning! Temperature below 18°C but above 12°C. You should take steps to increase the temperature or if not possible, make yourself warmer. There is a potential risk of ill health. The Amber light will flash instead of the Green.

Red Light - Danger! Temperature is less than 12°C but above 7°C. Your room temperature is far too low. This temperature range can lead to hypothermia. There is a risk of ill health. The Red light will flash instead of the Amber.

Red Light and Alarm Buzzer! Temperature below 7°C. Dangerously cold. The Red light will flash and the built in alarm will beep continuously.
